QUESTION 1

You have a computer that runs Windows 7.

You run Ipconfig as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that you can establish a DirectAccess connection to the network.

What should you do first?

A. Create a new VPN connection.

B. Configure a static IPv4 address.

C. Enable IPv6 on the network adapter.
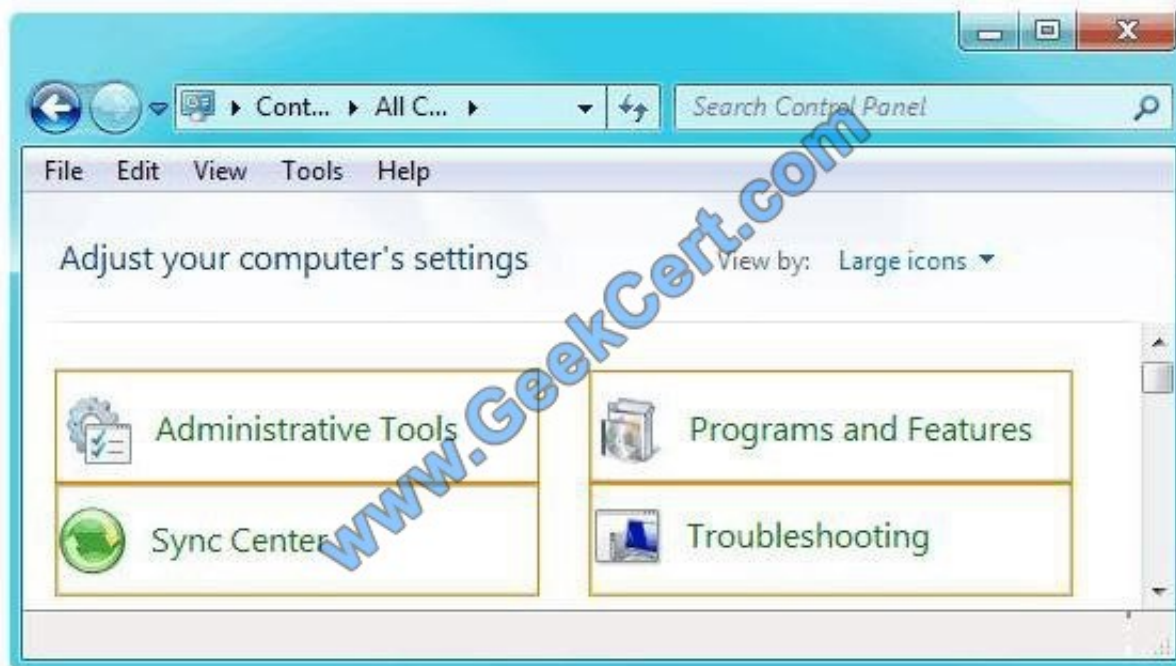

D. Add an additional default gateway address.
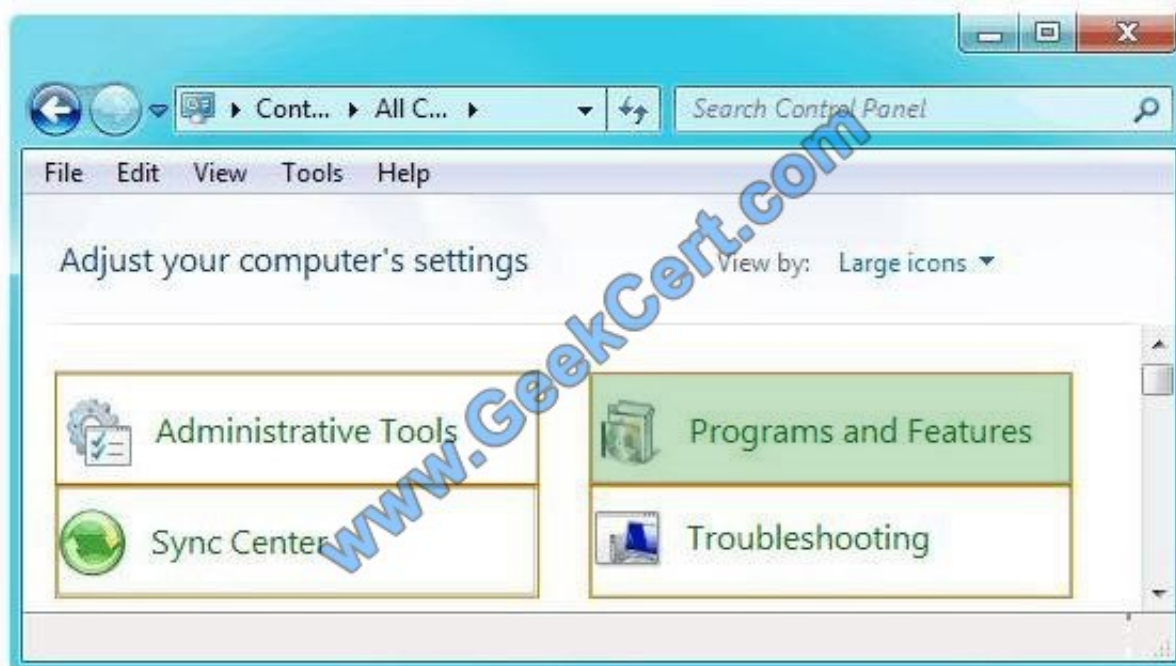

Correct Answer: C

QUESTION 2

You need to uninstall a Windows update from a computer that runs Windows 7.

Which Control Panel item should you use? (To answer, select the appropriate item in the Control Panel in the answer area.)

Hot Area:

Correct Answer:

QUESTION 3

You plan to install Windows 7 on a new portable computer.

The computer will be shared by users who speak English, French, and German.

You need to select an edition of Windows 7 that enables users to change languages as required. Which edition should you choose?

A. Starter

B. Ultimate

C. Home Premium

D. Professional

Correct Answer: B

QUESTION 4

Which of the following is used to control when the security pop-up notifications are used?

A. Security Control Manager

B. User Account Control

C. User Access Control Panel

D. Notification Control Settings Manager

Correct Answer: B

QUESTION 5

You have a computer that runs Windows 7.

You need to capture the operating system and all the computer configurations to a Windows image (WIM) file.

What should you do before you capture the image?

A. Run Oscdimg.exe.

B. Run Windows System Image Manager (Windows SIM).

C. Open a command prompt that has elevated privileges.

D. Start the computer by using Windows Preinstallation Environment (Windows PE).

Correct Answer: D

Windows PE

To access a network share as an installation source from the client computer, you need to boot the client computer into the Windows Preintallation Environment (Windows PE) environment. The Windows PE environment is a minimally

featured operating system that allows you to access diagnostic and maintenance tools as well as access network drives. Once you have successfully booted into the Windows PE environment, you can connect to the network share and begin

the installation by running Setup.exe.

NOT Windows SIM

Opens Windows images, creates answer files, and manages distribution shares and configuration sets.

NOT Oscdimg

Oscdimg is a command-line tool for creating an image file (.iso) of a customized 32-bit or 64-bit version of Windows PE. You can then burn that .iso file to a CD-ROM or DVD-ROM. Oscdimg supports ISO 9660, Joliet, and Universal Disk

Format (UDF) file systems.
